

CARING FOR YOUR HURRICANE CANDLE

This statement piece will add sensual ambiance to any room you choose to adorn. We have provided some essential candle care tips to enhance your sensory experience.

- The first burn is the most important. Your candle establishes a memory with this burn. Ensure you have a full layer of liquid across the top before you extinguish the wick with an Illumina Wick Snuffer. This first burn can take several hours.
- There will be some smoke from the wicks on the first burn. It will settle quickly but you will need to wipe the insides of the hurricane to keep it lovely and clean.
- You need to trim the wicks regularly. The wick will curl over like a Koru. Trim the curled part off with an Illumina Wick Trimmer. This will need to be done every second time you burn your candle.
- The brand of glassware selected for this display of your personal style is of the highest quality. It will handle the heat and it has been tested repeatedly to ensure your safety.
- Please ensure your candle is on a solid, sturdy table, away from drafts.
- Do not burn your candle completely to the bottom.
- Do not place your candle near curtains etc.
- Make sure you extinguish your candle before you go to sleep.
- When you are finished your candle, you can have it refilled or reuse the vase as a flower display.
