

Te Rā Folding Arm Awnings

The world's most admired
shade solutions

Luxaflex[®]

Beauty is in the details

Luxaflex® has been adding style and sophistication to New Zealand windows since the 1950's.

Our design heritage is founded on innovation for today and tomorrow while taking care to celebrate the beauty in the details. To us, form and function are synonymous. Consistently pushing the boundaries, we are proud to be the market-leaders in daylight regulation and solar heat control solutions.

SOLARFABRICS COLLECTION - 31

Te Rā Folding Arm Awnings

Swedish designed awnings that will outperform anything you've seen before, whatever the weather. Our worldwide search for the best solutions for New Zealand conditions brings you a range of innovative heavy-duty awnings that deliver unparalleled functionality.

Stability & strength

The Dyneema-tape connection used over the elbow joints and arm brackets on Te Rā awnings is 15 times stronger than steel on a weight-for-weight basis. Plus it's UV, chemical and moisture resistant to provide a durable and yet lightweight material that further improves the stability and tension provided by the awning's heavy-duty springs.

Awning coverage

The robust retractable arms on a Te Rā awning allow for maximum spans of seven metres in width and are capable of projecting up to four metres out from the building. This very generous coverage requires no posts or other structures for support (base structure allowing), thereby maximising your freedom to enjoy the cover provided and ensuring that the awning presents a clearer visual appearance.

Colours

All Te Rā awnings hardware comes in three standard colours: Gravel, Silver and White. This enables different components and accessories to be used across the entire range, further enhancing your ability to choose the awning solution that's right for you.

Optional extras

Depending on your model there are a range of optional extras to enhance the performance and capability of your awning. This includes a roller valance for additional sun protection, pitch control to better control shade, telescopic arms to increase wind resistance, and rain hoods for improved fabric protection when not in use.

The details

Fabric Options

We have a large range of colours available in fabrics suitable for Te Rā Folding awnings. Check out our website or your nearest dealer for more details.

Dickson® Orchestra

Is the awning fabric of choice when it comes to solar protection, guaranteeing excellent, long-term protection against UV rays, heat, glare and inclement weather.

Planosol®

Designed to withstand the toughest Kiwi weather, this 100% acrylic woven fibre fabric is fade resistant, making Planosol® the perfect solution for New Zealand awnings.

Models

Te Rā Origin

A proven design that utilises a simple square bar for easy installation in a wide variety of locations.

Te Rā Viento

By including a compact semi-enclosure feature Te Rā has created an awning system that protects the fabric from the elements when not in use.

Te Rā Eclipse

This solution is for installations that necessitate a narrow awning without compromising on weather protection.

Te Rā Beam

Lack of clearance above a doorway is no barrier to the Te Rā Beam, utilising a change of pitch at the elbow joint for good shading performance.

Te Rā Euro

The durable and very good looking Te Rā Euro folding arm awning will add style and sophistication to any outdoor setting.

Operating Systems

Crank Control

A manual crank control will easily project and retract awnings up to 5500mm in width. Larger awnings will benefit from motorised operation due to the weight of the awning.

Motorisation

Operate your awning with the touch of a button using either a wall switch, remote control, Somfy® Connexoon or for complete automation consider sun and wind sensors and voice activation.

Accessories

Roller Valance

Add an additional screening fabric to your awning, which is easily operated by a Crank Handle and stores away when not in use. Not available with Te Rā Origin or Viento.

Rain Hood

An optional Rain Hood is a stylish accessory that will provide improved fabric protection from the elements and extend the life of your awning's fabric. Not available with Te Rā Viento.

Telescopic Arm

A Telescopic Pole can be used in windy conditions to stabilise the front bar, increasing your awning's wind resistance and extending its life. These poles are collapsible for easy storage. Not available with Te Rā Viento.

Pitch Control

Te Rā Origin, Euro, and Beam awnings have an optional adjustment function that allows you to vary the pitch of the Awning from -5° to -40° to better control Shade.
